

TriCaster™ 850 TW

Total Control for Live Action.

Finally, there's an ultimate solution for having complete control of extreme live action production. TriCaster™ 850 EXTREME™ or TriCaster 850, paired with the TriCaster 850 CS optional hardware control surface, gives operators optimal control over every source and function of the system interface. Now, the all new **TriCaster 850 TW** makes the capture of live action and replay more powerful and even easier by giving operators full management over TriCaster's Media Player capabilities, and providing a one-channel replay system.

Operators now have:

- Seamless hands-on control of TriCaster Media Players, making it easier to manage clips and live playback
- Dedicated replay operation that adds instant replay directly into TriCaster live production workflow
- Familiar mark-in and mark-out controls to create clips easily
- Normal and fast jog modes for quick access to individual frames
- Preset buttons that provide efficient one-touch playlist access
- Premium T-bar and jog wheel construction, which improves response, clip transport and smooth playback, at any speed

The new control surface provides the same desktop profile, attention to detail, durability and ergonomics of the TriCaster 850 CS. The two control surface modules align perfectly and provide capabilities that complement each other, and either may be operated as a single unit. TriCaster 850 TW will be available in September 2011, and retail in North America for US \$2,495. International pricing and availability may differ.
